

Piston Assembly with Rings and Wrist Pin

This piston assembly is designed for use in internal combustion engines. It includes the piston, piston rings, wrist pin, and circlips.

Product Overview

High-Performance Piston Assembly

This comprehensive piston assembly is engineered for reliable performance in internal combustion engines. The kit includes the primary piston, a complete set of piston rings, a precision-machined wrist pin, and necessary retaining clips. Designed to facilitate efficient combustion, manage oil consumption, and ensure optimal heat transfer, this assembly is a critical component for maintaining engine integrity and power delivery.

Technical Details

Included Components

- Piston
- Compression rings
- Oil control ring
- Wrist pin (gudgeon pin)
- Circlips/Retaining clips

Key Functions

Combustion Sealing, Oil Control, Heat Transfer, Force Transmission

Primary Function

Connects to the connecting rod to transfer force from the piston to the crankshaft.
