

Piston Pin

These piston pins connect pistons to connecting rods in engines. They are made from high-strength steel alloys and come in solid and hollow designs.

Product Overview

Precision Engineered Piston Pins

These high-performance piston pins are engineered for demanding applications in internal combustion engines and reciprocating machinery. Manufactured from high-strength steel alloys, they feature a precision-machined surface finish to ensure durability and minimal friction. The product line offers versatile configurations, including both solid and hollow designs, with specific options incorporating internal bores for optimized weight reduction and improved lubrication flow.

Technical Specifications

Surface Finish

Precision Machined • Smooth Finish

Material

High-strength steel alloy

Design Variations

Solid, Hollow, Internal Bore

Applications

Primary Applications

- Internal combustion engines
- Reciprocating machinery

Key Features

1 Optimized

Weight Reduction

1 Enhanced

Lubrication
