

# Piston Ring for Internal Combustion Engines

This piston ring is designed for optimal cylinder sealing in internal combustion engines. Its durable construction ensures reliable performance and reduced oil consumption.

## Product Overview

### Precision-Engineered Piston Rings

These piston rings are designed for optimal cylinder sealing and efficient engine performance in demanding marine and industrial environments. Crafted from durable materials, they are engineered to withstand high temperatures and pressures while ensuring long-lasting reliability and reduced oil consumption. Each ring features a precision gap for controlled expansion and contraction, maintaining consistent sealing under varying operating conditions.

## Compatibility

<b>2-Stroke Engine Compatibility</b>	S26MC, L35MC, S35MC, L42MC, S42MC, S46MC-C, L50MC, S50MC, S50MC-C, L60MC, S60MC, S60MC-C, L70MC, S70MC, L80MC, S80MC, K80MC, K80MC-C
<b>4-Stroke Engine Compatibility</b>	L16/24, L20/27, L23/30, L23/30A, L28/32, L28/32A, L28/32H

## Technical Features

### Key Performance Features

- Optimal cylinder sealing
- High-temperature resistance
- High-pressure durability
- Reduced oil consumption
- Precision gap for controlled thermal expansion
