

Planetary Concrete Mixer

Planetary concrete mixers provide efficient and homogeneous mixing of concrete. The robust motor and mixing mechanism deliver high-performance operation for various concrete applications, ensuring consistent, high-quality output.

Overview

High-Performance Planetary Mixing Solution

This planetary concrete mixer is engineered for the production of high-quality concrete, including hard, semi-hard, and plastic varieties. Designed for versatility, it is equally effective for mixing glass, ceramics, and refractory materials. Its robust construction and specialized gearbox ensure efficient, low-noise operation even under demanding production conditions.

Technical Features

Key Design Features

- Specially designed mixing device for faster, homogeneous results
- Wear-resistant mixing blades
- Drive system protection via flexible couplings
- Low-noise, high-efficiency gearbox
- Large-size access door for easy maintenance

Mixing Applications

Concrete, Glass, Ceramic, Refractory Materials

Optional Equipment

Available Options

Fluid Coupler • High-Pressure Cleaning Device • Water Content Tester
