

# Plasma Cutting Machine

This plasma cutting machine is designed for cutting metal sheets. It features adjustable current control, a digital display, and thermal overload protection.

## Product Overview

### Industrial Plasma Cutting Solution

This high-performance plasma cutting machine is engineered for precision metal sheet fabrication. Utilizing advanced IGBT inverter technology, it ensures stable and efficient cutting performance across diverse industrial applications. The unit is equipped with user-friendly controls, including adjustable current settings and a digital display, while integrated thermal overload protection ensures operational safety and longevity.

## Technical Specifications

### Rated Current

**100 A**

Rated Current

### Control Interface

- Adjustable current control
- Digital display

### Technology

IGBT Inverter

### Safety Features

Thermal Overload Protection

## Application

### Primary Application

Metal sheet cutting
