

Plasma Cutting Machine

This plasma cutting machine is compact and portable, designed for light to medium duty cutting. It features adjustable current control for precise cutting of various metal thicknesses.

Overview

Compact Plasma Cutting Solution

The LG-30 is a compact and portable plasma cutting machine engineered for light to medium-duty cutting applications. Its robust design features adjustable current control, allowing for precise cutting across various metal thicknesses. Built with a durable metal housing, this unit is designed to withstand demanding environments, making it an ideal choice for workshops, garages, and on-site fabrication projects.

Technical Specifications

Application Duty

Light Duty • Medium Duty

Key Features

- Adjustable current control
- Analog voltage display
- Analog current display
- Durable metal housing

Model Identifier

LG-30

Usage

Recommended Environments

Workshops, Garages, On-site fabrication
