

Plastic Bottle Blow Mold

This blow mold is designed for manufacturing plastic bottles with precision. Constructed from high-grade steel, it ensures consistent bottle formation and features optimized cooling channels.

Product Overview

Precision-Engineered Blow Moulding Solutions

This precision-engineered blow mould is designed specifically for high-efficiency plastic bottle manufacturing. Constructed from high-grade steel, it ensures consistent and accurate bottle formation across every production cycle. The design features optimized cooling channels for superior heat dissipation and a multi-cavity configuration to maximize output for high-volume beverage and packaging applications.

Technical Specifications

Compatible Materials	PET, HDPE, PP
Build Material	High-grade steel

Performance Features

Key Design Features

- Optimized cooling channels for efficient heat dissipation
- Multi-cavity design for increased production output
- Robust construction for long-term durability
- Minimal maintenance requirements

Ideal Applications

High-volume beverage production • Industrial packaging
