

Plastic Bottle Blowing Machine

The MG-90 mould blowing machine is an improved model designed according to CE standards, featuring an added safety door. This machine produces plastic bottles and containers and includes an air dryer, air filter, and a high-pressure air compressor.

Overview

Advanced Mould Blowing Technology

The MG-90 mould blowing machine is an enhanced production solution designed for efficiency and safety. Built to comply with international CE standards, this model features an integrated safety door to protect operators during the production process. It is a comprehensive system that includes essential components like an air dryer, air filter, and high-pressure air compressor to ensure high-quality plastic bottle and container manufacturing.
