

Plastic Crushing Machine for Recycling

This machine efficiently crushes waste tape, rejected products, and scrap from woven bag production. The crushed material can then be reused for tape drawing.

Product Overview

Industrial Plastic Recycling Solution

This heavy-duty plastic crushing machine is engineered for efficient size reduction of various plastic materials, including waste tape, rejected products, and scrap from woven bag production. By processing these materials, the machine enables manufacturers to repurpose scrap for tape drawing applications, significantly improving material efficiency. Its robust construction and high-torque motor ensure reliable performance in demanding recycling and waste management environments.

Technical Specifications

Core Features

- Robust heavy-duty construction
- High-torque motor system
- Hardened steel cutting blades
- Integrated safety mechanisms
- Easy maintenance access

Suitable Materials

Woven Bags, Waste Tape, Rejected Plastic Products, Plastic Scrap

Performance Metrics

Performance Highlights

1 Size Reduction

Primary Function

1 Recycling

Application
