

# Plastic Explosive Material for Demolition

This plastic explosive is composed of explosives, a plastic binder, and a plasticizer. It is detonated by a blasting cap or detonator, initiating a chain reaction within the material.

## Product Overview

### High-Performance Demolition Material

This plastic explosive material is engineered for professional demolition and construction applications. Formulated with a plastic binder and plasticizer, the material is highly moldable, allowing for precise placement in various environments. It is designed to be initiated by a blasting cap or detonator, ensuring reliable performance in demanding demolition scenarios.

## Technical Composition

### Composition

- Explosive base
- Plastic binder
- Plasticizer
- Marker/Odorizing taggant

### Application Areas

Military, Civilian, Demolition, Construction

### Detonation Method

Blasting cap or detonator
