

Plastic Extrusion Die

This high-precision plastic extrusion die is designed for manufacturing plastic products with consistent dimensions and smooth surfaces. It features multi-zone temperature control, adjustable die lips for precise thickness control, and a robust cooling system for efficient heat removal.

Overview

High-Precision Extrusion Solution

This high-precision plastic extrusion die is engineered for manufacturing plastic products that require consistent dimensions and superior surface finishes. It incorporates advanced multi-zone temperature control and adjustable die lips to ensure precise thickness regulation during production. Built from high-quality steel, this component offers exceptional durability and long-lasting performance for demanding industrial environments.

Technical Features

Key Functionalities

- Multi-zone temperature control
- Adjustable die lips for thickness control
- Robust integrated cooling system

Construction & Materials

Durability

Industrial Grade • High-Durability Steel

Material

High-quality steel
