

Plastic Extrusion Die Head

Precision engineered for high-volume production of plastic profiles. It features multiple heating zones and adjustable die lips for precise temperature control.

Product Overview

Precision Engineering for Plastic Extrusion

This precision-engineered plastic extrusion die head is specifically designed to meet the demands of high-volume production environments. It features advanced multi-zone heating capabilities for superior temperature control and adjustable die lips that allow for meticulous fine-tuning of profile dimensions. Built with robust materials, this component ensures long-term durability and consistent performance when processing a wide range of thermoplastic materials.

Technical Features

Heating System	Multi-zone heating
Adjustment Capabilities	Adjustable die lips, Precision tuning

Compatibility

- Compatible Materials
- Thermoplastic materials

Performance Metrics

Production Capability
High-volume

Construction

Construction	Robust industrial-grade construction
