

Plastic Extrusion Die Head

This high-precision plastic extrusion die head is designed for manufacturing plastic products with consistent dimensions and smooth surfaces. It features multiple heating zones for uniform temperature control and adjustable die gap for varying product thicknesses.

Product Overview

High-Precision Extrusion Engineering

This high-precision plastic extrusion die head is engineered to deliver consistent dimensions and superior surface finishes for a variety of plastic products. Designed for demanding industrial environments, the unit features robust construction to ensure long-term durability and reliable performance. With advanced temperature control and adjustable geometry, it provides the flexibility needed for diverse thermoplastic extrusion processes.

Technical Specifications

Construction

Robust • Industrial Grade • High-Precision

Heating Zones	3 zones
Die Gap Adjustment	Yes

Compatibility

Compatible Materials	Thermoplastics
