

Plastic Extrusion Line

This extrusion line is designed for continuous production of plastic profiles, pipes, or sheets. It features a control panel for managing the extrusion process, along with a feeding hopper, extruder, and cooling system.

Overview

Professional Plastic Extrusion System

This high-performance plastic extrusion line is engineered for the continuous and efficient production of plastic profiles, pipes, and sheets. The system integrates a robust feeding hopper, a precision extruder, and an advanced cooling unit featuring multiple water tanks and rollers. Equipped with a centralized control panel, it offers streamlined management of the entire extrusion process for consistent manufacturing quality.

System Components

Key System Components

- Feeding Hopper
- Extruder Unit
- Multi-tank Cooling System
- Roller Cooling Assembly
- Haul-off Unit
- Integrated Control Panel

Control System

Centralized Control • Process Automation

Application

Production Capabilities

Plastic Profiles, Plastic Pipes, Plastic Sheets, Continuous Production
