

Plastic Extrusion Machine

This high-performance plastic extrusion machinery is designed for efficient production of plastic profiles, tubes, and rods. The advanced system features precise temperature control, a high-capacity feeding mechanism, and a sophisticated cooling and cutting unit.

Overview

High-Performance Plastic Extrusion System

This advanced plastic extrusion machinery is engineered for the efficient and precise production of plastic profiles, tubes, and rods. Featuring a robust extruder with precise temperature control and a high-capacity feeding mechanism, it ensures consistent quality and minimal waste. The system is highly versatile, suitable for materials including PVC, PE, PP, and ABS, and offers customizable configurations to meet specific production requirements.

Technical Specifications

Production Capabilities

- Plastic profiles
- Tubes
- Rods

Compatible Materials

PVC, PE, PP, ABS

Key Features

System Highlights

Precise Temperature Control • High-Capacity Feeding • Customizable Configuration • Minimal Waste Design
