

Plastic Extrusion Machinery

This machinery is designed for the extrusion and processing of plastic materials. It is equipped with a control panel for precise adjustment of temperature, speed, and pressure to ensure optimal processing conditions.

Overview

High-Efficiency Plastic Extrusion System

This industrial-grade plastic extrusion machinery is engineered for precise processing and shaping of various plastic materials. The system integrates a multi-stage workflow, featuring a dedicated feeding unit, a high-control extrusion unit, and downstream shaping, cooling, and winding components. Designed for versatility, it is ideal for the manufacturing of pipes, profiles, and hoses with consistent quality control.

Technical Specifications

System Components

- Feeding Unit
- Extrusion Unit with Control Panel
- Shaping and Cooling Unit
- Winding Unit

Control Parameters

Temperature Control, Speed Adjustment, Pressure Regulation

Application

Compatible Output Products

Pipes • Profiles • Hoses

Available Product Colors

Blue, Yellow, Red
