

Plastic Extrusion Processing Line

This plastic machinery line is designed for efficient plastic extrusion and processing. It includes a material feeder, extruder, cooling system, and take-up unit.

Overview

High-Efficiency Extrusion Solution

This complete plastic extrusion processing line is engineered for high-efficiency manufacturing and precise material handling. The system integrates a material feeder, a high-performance extruder with advanced temperature and speed controls, a rapid water-cooling system, and a reliable take-up unit. Designed for versatility, this production line provides a robust solution for various plastic manufacturing requirements.

System Components

Included Components

- Material Feeder
- Extruder Unit
- Water Cooling System
- Take-up Unit
