

Plastic Extrusion Production Line

This plastic machinery appears to be a complete production line for processing plastic materials. It is designed for continuous operation in a manufacturing environment and includes a feeding, extrusion, conveying, and collection system.

Product Overview

Industrial Plastic Extrusion Line

This complete plastic extrusion production line is engineered for continuous, high-efficiency manufacturing operations. The system integrates a robust feeding hopper, a precision extrusion unit, and a synchronized conveying and collection system. Designed for durability and stability, it provides a comprehensive solution for large-scale plastic material processing.

System Configuration

Included Modules

- Material Feeding System with Hopper
- Main Extrusion Unit
- Integrated Control Panel
- Conveying System
- Collection Unit

Construction Material

Industrial-grade metal

Operational Features

Operational Mode

Continuous Operation • Automated Control
