

Plastic Film and Bag Making Machine

This machine is designed for producing plastic film and bags. It processes plastic material through extrusion or molding, cooling, and then winding or cutting.

Overview

Industrial Film & Bag Production

This high-capacity industrial machinery is engineered for the efficient production of plastic films and bags. Featuring a robust multi-level design, it streamlines the process from raw material input to finished roll winding. With integrated controls and precise extrusion capabilities, this system is optimized for high-volume manufacturing environments.

Technical Specifications

Key Components

- Raw material feeding mechanism
- Extrusion unit
- Cooling system
- Roller guidance system
- Winding/Cutting mechanism
- Integrated electrical control panel

Machine Type

Plastic Film and Bag Making Machine

Processing Capabilities

Extrusion, Film Blowing, Bag Forming, Winding

Performance Metrics

Production Efficiency

1 Continuous

Operational Mode
