

Plastic Film Blowing Machine

This plastic film blowing machine is designed for producing plastic film. It features a vertical tower structure with multiple rollers and processing units for efficient film production.

Overview

High-Efficiency Film Production

This plastic film blowing machine is engineered for the continuous, reliable production of plastic film from raw granules. Featuring a robust vertical tower structure, the system integrates precise extrusion, heating, and blowing sections to ensure consistent film quality. Equipped with an intuitive electrical control panel, it offers operators streamlined monitoring and control over the entire production cycle.

Technical Specifications

Core Components

- Extrusion unit with hopper
- Heating and blowing section
- Vertical tower structure
- Winding unit
- Electrical control panel

Machine Type	Plastic Film Blowing Machine
Construction	Robust Frame, Industrial Grade, Mechanical Processing Units
