

Plastic Film Extrusion Line

This complete extrusion line produces plastic film and sheets for packaging. It features a film winder, rollers, tensioning devices, control cabinet, extruder, cooling system, and recycling unit for continuous production.

Overview

High-Efficiency Plastic Film Extrusion Line

This industrial-grade plastic film extrusion line is engineered for the continuous production of high-quality plastic packaging materials. The system integrates advanced components including twin-hopper extruders, precise tensioning rollers, and a dedicated cooling system to ensure consistent output. Designed for reliability and scalability, this machinery provides a robust solution for manufacturers seeking to optimize their packaging material production workflow.

Technical Specifications

Included Components

- Twin-hopper extruder unit
- Precision film winder
- Integrated roller and tensioning system
- Advanced control cabinet
- Cooling system
- Pelletizing/Recycling module

System Type

Continuous Production • Industrial Grade

Production Focus

Plastic Film, Plastic Sheets, Packaging Materials
