

Plastic Film Laminating Machine

This plastic machinery processes plastic films or sheets. It features a heating unit and rolling mechanism for tension control and alignment.

Overview

Professional Film Processing Solution

This industrial-grade laminating machine is engineered for high-precision processing of plastic films and sheets. Featuring an integrated heating and treatment cabinet alongside a sophisticated tension control rolling mechanism, it ensures consistent material alignment and quality output. Designed for demanding production environments, this equipment is ideal for laminating, coating, and printing applications.

Technical Specifications

Compatible Materials

- Plastic Films
- Plastic Sheets

Key Mechanical Components

- Heating/Treatment Unit
- Multi-Roller System
- Tension Control Framework
- Material Alignment Guides

Primary Applications

Laminating, Coating, Printing

Control Interface

Yes
