

Plastic Film Slitting and Rewinding Machine

This high-speed machine slits and rewinds plastic films and flexible packaging materials. It features precise tension control, automatic web guiding, and adjustable slitting widths.

Overview

High-Performance Converting Solution

This high-speed slitting and rewinding machine is engineered for precision processing of plastic films and flexible packaging materials. It features advanced tension control and automatic web guiding systems to ensure consistent output quality. Designed for versatility, the machine handles various plastic films, laminates, and paper-based materials with ease, making it an essential asset for modern converting operations.

Technical Capabilities

Key Machine Features

- High-speed operation
- Precise tension control system
- Automatic web guiding
- Adjustable slitting widths
- Integrated control panel

Compatible Materials

Plastic Films, Flexible Packaging, Laminates, Paper-based Materials

Control System

Centralized control panel for parameter monitoring and operation
