

Plastic Film Winding Machine

This machine is engineered for processing plastic film and sheeting. It utilizes a motorized winding mechanism and automated controls for precise speed and tension.

Overview

Industrial Film Winding Solution

This industrial-grade plastic film winding machine is engineered for high-performance processing and handling of plastic materials. Featuring a robust metal frame construction, it is designed for continuous, reliable operation in demanding environments. The integrated control panel provides precise management over winding speed and tension, ensuring consistent output quality for slitting, converting, or winding applications.

Technical Specifications

Operation Mode

Automated • Motorized

Machine Type

Plastic Film Winding Machine

Frame Construction

Industrial-grade metal frame

Key Features

Control Features

- Precise speed control
- Tension management
- Automated winding cycle

Suitable Applications

Winding, Unwinding, Slitting, Converting
