

# Plastic Flat Filament Extrusion Wiredraw Machine

This plastic flat filament extrusion wiredraw machine is designed for producing high-quality flat filaments from plastic materials. It features a robust extrusion system and precise wiredraw mechanism, and advanced control system for optimal performance and consistent output.

## Product Overview

### High-Performance Extrusion Solution

The SJPL-D Plastic Flat Filament Extrusion Wiredraw Machine is precision-engineered for the production of high-quality PP and HDPE flat filaments. This unit focuses on delivering superior filament consistency while maintaining low energy consumption to maximize economic efficiency. It serves as a robust solution for manufacturers requiring reliable output for various industrial textile applications.

## Technical Specifications

Compatible Materials

PP, HDPE

## Applications

### Suitable Applications

- Woven bags
- Chemical bags
- Grain bags
- Cement bags
- Mesh bags
- FIBC / Bulk bags

## Performance Metrics

### Key Performance Benefits

**1 Grade**

High Filament Quality

**0 Optimized**

Low Energy Consumption
