

Plastic Injection Molding Machine

This injection molding machine offers energy-saving operation and superior stability. It is designed for high-speed performance and delivers high precision in plastic part manufacturing.

Overview

The Artisan's Touch: MK6.6/A Series

The MK6.6/A series represents the next evolution in high-performance injection molding, developed from decades of application experience and rigorous user research. This machine is engineered to redefine productivity, offering a robust platform for precision plastic part manufacturing. It combines advanced hydraulic systems with a user-friendly interface to deliver consistent quality and high-efficiency output for professional manufacturing environments.

Key Metrics

Clamping Force Class

168 Tons

Clamping Force

Features

Core Advantages

High Precision, High Productivity, Advanced Hydraulics, User-Friendly Interface, Robust Clamping Unit
