

# Plastic Injection Molding Machine

This injection molding machine delivers efficient and precise plastic part production. It features a robust clamping unit, an advanced injection system, and a user-friendly control interface.

## Overview

### Advanced Two-Platen Injection Molding

The SM-TP series represents a high-performance solution for efficient and precise plastic part production. Engineered with Japanese-based design principles, this machine features an advanced servo drive system that balances high productivity with a compact footprint. It is built to deliver consistent quality and minimal cycle times, making it a reliable choice for demanding manufacturing environments.

## Technical Specifications

Drive System	Advanced Servo Drive
Clamping Technology	Two-Platen

## Key Features

### Performance Highlights

**1900 Tons**  
Clamping Force

Design Philosophy	Japanese-based design, Compact footprint, High-performance
