

Plastic Injection Mould

This is a plastic injection mould used in manufacturing. It features multiple circular and oval cavities for creating specific component shapes.

Product Overview

Precision Injection Moulding Component

This high-precision plastic injection mould is engineered for consistent output and reliability in manufacturing environments. Featuring a robust design with multiple cavity configurations, including five circular and one oval aperture, it ensures structural integrity for complex parts. The integrated mounting features facilitate rapid alignment and installation, making it an ideal solution for streamlined production workflows.

Design Specifications

Cavity Configuration

- 5 Circular holes
- 1 Oval hole

Key Features

Raised perimeter edge, Bottom edge cutouts, Integrated mounting points

Physical Attributes

Color

White

Material Type

Industrial Grade Plastic
