

Plastic Machinery Component with Rectangular Opening

This is a white plastic machinery component designed for use in plastic or rubber machinery. It features a rectangular design with a central opening and a layered construction.

Product Overview

Precision Machinery Component

This high-quality plastic machinery component is designed for industrial applications requiring a rectangular interface. Featuring a clean, layered construction with a recessed inner section and a robust outer frame, it is engineered for consistent performance. Its smooth, durable surface makes it an ideal replacement or integration part for various machinery setups.

Physical Characteristics

Color

White

Material

Industrial-grade plastic

Design Features

Geometry

Rectangular with central slot

Construction

Layered, Recessed inner section, Raised outer frame
