

Plastic Pipe and Profile Extrusion Line

This extrusion line is designed for plastic pipes and profiles. It ensures continuous production of plastic products with consistent dimensions and quality, incorporating a material hopper, extruder, cooling section, haul-off unit, and cutting or coiling unit.

Product Overview

High-Efficiency Extrusion System

This plastic pipe and profile extrusion line is engineered for the continuous, high-precision manufacturing of plastic products. The complete system integrates a material hopper, a robust extruder, a cooling section, a haul-off unit, and a final cutting or coiling unit. Designed for industrial-grade reliability, it ensures consistent dimensions and superior product quality for various plastic extrusion applications.

System Components

Included Equipment

- Material Hopper
- Extruder Unit
- Cooling Section
- Haul-off Unit
- Cutting/Coiling Unit

Performance Metrics

Production Mode

Continuous Production • Automated

Primary Applications

Plastic Pipes, Plastic Profiles
