

Plastic Pipe and Profile Extrusion Line

High-performance plastic extrusion machinery designed for efficient and precise production of plastic pipes and profiles. This advanced system features a robust extruder, a cooling system, and a haul-off unit, ensuring consistent quality and dimensional accuracy.

Overview

High-Performance Extrusion Solution

This high-performance plastic extrusion line is engineered for the efficient and precise production of plastic pipes and profiles. The system integrates a robust extruder, advanced cooling mechanisms, and a high-precision haul-off unit to ensure consistent quality and strict dimensional accuracy. It is an ideal manufacturing solution for processing various plastic materials, including PVC, PE, and PP.

Technical Capabilities

Compatible Materials

PVC, PE, PP

System Components

Core Components

- Robust Extruder Unit
- Cooling System
- Haul-off Unit

Performance Metrics

Key Performance Indicators

1 High

Dimensional Accuracy

1 High

Production Consistency
