

Plastic Pipe and Profile Production Line

This plastic machinery is designed for the production of plastic pipes or profiles. It consists of several key components, including an extruder, a cooling tank, a haul-off unit, and a cutting machine.

Overview

High-Efficiency Production Line

This plastic machinery is engineered for the reliable production of plastic pipes and profiles. The system integrates a complete extrusion process, including melting, shaping, cooling, and precise cutting. Designed for consistent performance, it features a robust control panel that allows for accurate monitoring and adjustments throughout the manufacturing cycle.

System Components

Key Components

- Extruder
- Cooling Tank
- Haul-off Unit
- Cutting Machine
- Control Panel

Operational Features

Process Capabilities	Pipe Production, Profile Production, Material Melting, Material Shaping, Automated Cutting, Speed Control
Control System	Yes
