

Plastic Pipe Extrusion Line

This high-performance plastic extrusion machinery is designed for continuous production of plastic pipes or profiles. The system incorporates a robust extruder, precise temperature control, and advanced cooling mechanisms to ensure consistent product quality and dimensional accuracy.

Product Overview

High-Performance Extrusion System

This high-performance plastic extrusion machinery is engineered for the continuous and efficient production of plastic pipes and profiles. The system integrates a robust extruder with precise temperature control and advanced cooling mechanisms to ensure consistent product quality and superior dimensional accuracy. Designed for versatility, it supports various plastic materials to meet diverse industrial production requirements.

System Components

Key Modules

- Material feeding system
- Robust extruder unit
- Precision die head
- Cooling tank
- Haul-off unit

Operational Capabilities

Continuous Production, Precision Temperature Control, Advanced Cooling, Dimensional Accuracy
