

Plastic Pipe Extrusion Machine

This machine is designed for manufacturing plastic pipes of various sizes. It includes a hopper for material input, an extrusion unit with a control panel, and a pipe forming section.

Overview

Professional Plastic Pipe Extrusion Solution

This industrial-grade plastic pipe extrusion machine is engineered for high-efficiency manufacturing of various plastic pipe sizes. It features an integrated material hopper, a precision-controlled extrusion unit, and a dedicated pipe forming section. Designed for reliability and consistent output, this equipment is an essential asset for plastic pipe production facilities.

Technical Specifications

Machine Type	Plastic Pipe Extrusion Machine
Primary Function	Plastic pipe manufacturing and forming

Key Features

Core Components

- Material input hopper
- Extrusion unit
- Integrated control panel
- Pipe forming section
