

Plastic Pipe Production Line

This production line is designed for the continuous creation of plastic pipes. It integrates an extruder, cooling system, and cutting unit, managed by a control panel for parameter adjustments.

Overview

High-Efficiency Plastic Pipe Production

This industrial-grade plastic pipe production line is engineered for continuous, high-volume manufacturing. It features an integrated system comprising an extruder, cooling unit, and precision cutting station. Designed for stability and durability, the machinery allows operators to precisely control critical production parameters such as speed, temperature, and cutting length to ensure consistent output quality.

Technical Capabilities

Integrated System Components

- Extruder
- Cooling System
- Cutting Unit
- Control Panel

Process Control

Speed Adjustment, Temperature Control, Cutting Length Precision

Construction

Build Quality

Sturdy Frame • Continuous Production Ready • Durable Construction
