

Plastic Profile Extrusion Line

The SJYF Type Plastic Profile Production Line extrudes various plastic profiles. It includes an extruder, cooling system, haul-off unit, cutting machine, and a control panel to manage extrusion parameters.

Overview

High-Efficiency Plastic Profile Extrusion Line

The SJYF Type Plastic Profile Production Line is a comprehensive, interconnected manufacturing system engineered for the precise extrusion of various plastic profiles. This integrated solution combines an extruder, cooling system, haul-off unit, and cutting machine into a streamlined workflow. Designed for versatility, it is ideal for producing high-quality window profiles, door profiles, and custom plastic shapes with consistent extrusion parameters managed via a centralized control panel.

Technical Capabilities

System Components

- Extruder Unit
- Cooling System
- Haul-off Unit
- Cutting Machine
- Centralized Control Panel

Model Type

SJYF Type

Applications

Suitable Applications

Window Profiles, Door Profiles, Custom Plastic Shapes
