

Plastic Pulverizer Machine

The plastic pulverizer machine is designed for grinding various plastics into powder form. It is suitable for processing materials like PVC, PE, and other thermoplastics, producing fine powders for further manufacturing processes.

Overview

High-Efficiency Plastic Pulverizer

This plastic pulverizer machine is precision-engineered to transform various plastic materials into high-quality powder form, ready for further manufacturing processes. Designed for versatility, it effectively processes thermoplastics such as PVC and PE. The system includes a comprehensive setup featuring a feeding hopper, robust grinding unit, conveying pipe, and a collection cyclone to ensure consistent output and operational ease.

Technical Specifications

System Components

- Control Panel
- Feeding Hopper
- Grinding Unit
- Conveying Pipe
- Collection Cyclone

Compatible Materials	PVC, PE, Thermoplastics
Output Form	Fine Powder
