

Plastic Recycling Washing Line

This plastic recycling washing line efficiently and thoroughly cleans plastic waste materials. The system integrates multiple stages of processing, including crushing, washing, separating, and drying, to produce clean plastic flakes ready for further use.

Overview

Industrial Plastic Recycling Solution

This plastic recycling washing line is engineered for the efficient and thorough cleaning of plastic waste materials. Designed for industrial-scale operations, the system integrates multiple processing stages including crushing, washing, separating, and drying to produce high-quality plastic flakes. Its robust construction and automated controls ensure seamless operation and consistent, high-throughput performance.

System Components

Integrated Components

- Conveyor system
- Crusher unit
- Washing tanks
- Separation system
- Drying system

Operational Capabilities

Key Features

Automated Controls • Robust Construction • High Throughput

Processing Stages

Crushing, Washing, Separating, Drying
