

Plastic Sheet Extrusion Machine

This machine is designed for continuous production of plastic sheets. It uses an extrusion system with rollers and cooling units to shape and solidify the plastic.

Overview

High-Efficiency Plastic Sheet Extrusion System

This industrial-grade extrusion machine is engineered for the continuous production of high-quality plastic sheets and panels. Featuring an integrated hopper system, precision rollers, and advanced cooling units, it ensures consistent material shaping and solidification. Equipped with intuitive control panels, the system allows for precise monitoring and adjustment of sheet thickness and output quality, making it an ideal solution for large-scale manufacturing operations.

System Capabilities

Key Components

- Material Hopper
- Extrusion System
- Precision Roller Series
- Cooling Units
- Digital Control Panel

Process Type

Continuous Extrusion

Operational Features

Continuous Production, Precision Monitoring, Variable Thickness Control
