

Plastic Sheet/Film Production Line

This plastic machinery is a complete production line for manufacturing plastic sheets or films. It is designed for continuous operation, with automated controls to ensure consistent quality and efficient production.

Overview

High-Efficiency Plastic Sheet Production System

This complete plastic sheet and film production line is engineered for continuous, high-volume manufacturing. The system integrates advanced extrusion technology with precise cooling and calendaring units to ensure consistent material quality and thickness control. Designed for industrial-scale operations, it features automated controls and comprehensive cutting mechanisms for streamlined, efficient production.

Technical Specifications

Line Components

- Twin-Extruder
- Die
- Pressing Unit
- 3-Roller Calender
- All-side Impression Unit
- Cooling Bracket
- Haul-off Unit
- Edge Cutting Unit
- Longitudinal Cutting Machine
- Cross Cutting Machine

System Capacity

25000 unit

Production Capacity Index

Extruder Configuration

180/156Twin-Extruder

Features

Key Capabilities

Continuous Operation, Automated Controls, Precision Thickness Control, Surface Finishing, Automated Trimming
