

Plastic Waste Recycling Line

This plastic recycling line transforms plastic waste into reusable materials. It integrates feeding, shredding, washing, and drying components for efficient processing.

Overview

Industrial Plastic Recycling Solution

This complete plastic waste recycling line is engineered for high-volume industrial processing, transforming plastic waste into reusable raw materials. The integrated system features a streamlined workflow including feeding, shredding, washing, and drying stages to ensure high output quality. Built with heavy-duty components, this durable machinery is designed to handle demanding recycling operations efficiently.

System Components

Processing Stages

- Feeding Conveyor
- Shredder / Granulator
- Washing Unit
- Drying System
- Output Conveyor

Construction

Heavy-duty, Industrial-grade, Metal Frame

Design

Color Scheme

Blue • Yellow
