

# Plastic Weaving Circular Loom

This high-speed circular loom efficiently weaves plastic woven fabrics. It is designed for producing woven sacks, tarpaulins, and geotextiles.

## Overview

### High-Performance Circular Loom

This high-speed circular loom is engineered for the efficient production of plastic woven fabrics, including woven sacks, tarpaulins, and geotextiles. Designed for continuous, robust operation, it features automatic tension control and precise weft insertion mechanisms. It is an ideal solution for manufacturers requiring high-output reliability and versatility in fabric widths and densities.

## Technical Capabilities

### Core Features

- Automatic tension control
- Precise weft insertion
- Robust construction for continuous operation
- High-speed production capability

### Primary Applications

Woven Sacks, Tarpaulins, Geotextiles

## Performance Metrics

### Performance Highlights

**1 High**

Production Speed

**1 Continuous**

Operational Mode
