

Plastic Winding Machine

Plastic winding machines are used to efficiently wind plastic materials. These machines are designed to streamline production processes and ensure consistent results.

Product Overview

Industrial Plastic Winding Solution

This high-performance plastic winding machine is engineered for precision and efficiency in industrial processing environments. Designed to handle continuous winding operations, it ensures consistent tension and uniform material distribution. This equipment is an essential component for streamlined plastic manufacturing workflows, offering reliability and durability for high-volume production needs.

Operational Metrics

Winding Precision

98.5 % Efficiency Rate	500 m/min Max Speed
----------------------------------	-------------------------------

Technical Specifications

Automation Level

Fully Automatic • PLC Controlled

Power Requirements

- Voltage: 380V / 50Hz
- Phase: 3-Phase
- Total Power: 7.5 kW

Compatible Materials

PVC, PE, PP, Synthetic Polymers
