

Plate Compactor

This plate compactor is designed for efficient compaction of soil, gravel, and asphalt. Its robust construction and powerful engine ensure reliable performance on construction sites.

ADDITIONAL IMAGES

Product Overview

Professional plate compactor designed for reliability in demanding construction site environments.

Professional Soil Compaction Solutions

These plate compactors are engineered for professional construction and landscaping applications, offering high-efficiency compaction for sand, gravel, and cohesive soils. Designed with versatility in mind, the series includes specialized models for narrow, confined spaces such as trenches and small repair sites. Built for reliability and low maintenance, these machines provide a cost-effective solution for contractors demanding consistent performance on diverse work surfaces.

Certifications

Quality Standards

ISO9001, CE Certified, US EPA

Technical Specifications

Advanced hydraulic reversible plate compactor configured for high-production compaction tasks.

Performance Parameters

Model	Power (kW)	Weight (kg)	Compaction Depth (cm)
MS50	1.8	54	20
MS60	4	62	20
MSV80	4	74	30

Key Features

Primary Advantages

- Low cost of maintenance and usage
- Versatile for cohesive soils, silt, clay, and granular materials
- Engineered for narrow confined areas and trenches
- Economical design for high-production environments
