

Plate Heat Exchanger for HVAC and Industrial Use

This plate heat exchanger is designed for optimal thermal transfer in HVAC and industrial applications. The compact, brazed plate design is constructed from corrosion-resistant stainless steel.

Overview

High-Efficiency Thermal Transfer

This plate heat exchanger is engineered for optimal thermal transfer in both HVAC and industrial environments. Featuring a robust, compact, brazed plate construction made from corrosion-resistant stainless steel, it ensures long-term durability and reliability. It is an ideal solution for diverse heating, cooling, and heat recovery applications.

Technical Specifications

Design Type	Brazed Plate
Construction Material	Stainless Steel
Key Features	Corrosion-resistant, Compact Design, High-Efficiency

Applications

Suitable Applications

- HVAC Systems
- Industrial Cooling
- Heating Systems
- Heat Recovery
