

Plate Making and Printing Machine

This printing machine is designed for both plate making and printing processes. It features multiple printing stations, a control panel, and a material handling system.

Overview

Professional Printing Solution

This plate making and printing machine is engineered for high-volume industrial printing applications. It features a robust frame construction integrated with precise tension controls, rollers, and cylinders to ensure consistent quality output. Designed for efficiency, the system incorporates advanced material handling and a centralized control panel for streamlined operation.

Technical Specifications

System Components

- Multiple printing stations
- Centralized control panel
- Material handling system
- Precision rollers and cylinders
- Tension control mechanisms

Core Capabilities

Plate Making, Printing Process, High-Volume Production

Construction

Build Quality

Robust Frame • Industrial Grade
