

Plunge Router for Woodworking

This plunge router is a versatile power tool for creating various cuts in woodworking. It features adjustable depth settings and a sturdy base for stability and precise control.

Product Overview

Professional Plunge Router

This high-performance plunge router is designed for versatile woodworking applications, including the creation of grooves, dados, rabbets, and intricate decorative edges. Equipped with a spring-loaded base and a high-torque motor, it allows for precise, controlled vertical plunges into the workpiece. Featuring adjustable depth settings and ergonomic handles, this tool provides the stability and control required for both professional cabinetry and detailed DIY woodworking projects.

Technical Specifications
