

Pneumatic Air Caster Load Moving System

Air casters are popular lifting tools used to move heavy loads. This load moving equipment is capable of transporting very large machinery.

Overview

Heavy-Duty Pneumatic Load Moving System

This pneumatic air caster system is engineered to transport exceptionally heavy and large machinery with ease and precision. Utilizing air-powered technology, the system provides a smooth, quiet, and controlled method for relocating industrial equipment. Available in four-module or six-module configurations, it offers flexible load-bearing solutions tailored to specific operational requirements.

Performance

Maximum Load Capacity

60 tons

Max Load

Configuration

Module Configurations

- 4-Module System
- 6-Module System

Technical Requirements

Operational Requirements

Compressed Air Supply, External Air Source Required, Lifting Jack Recommended for Heavy Loads
