

Pneumatic Air Cylinder

This pneumatic air cylinder is designed for use in machinery and industrial applications. It provides controlled linear motion powered by compressed air and features adjustable stroke length.

Overview

High-Performance Pneumatic Air Cylinder

This pneumatic air cylinder is engineered for reliable linear motion in industrial automation and machinery applications. Built with a precision-engineered piston and bore, it ensures smooth, consistent operation even in demanding environments. It features high-quality seals to prevent air leakage and offers adjustable stroke capabilities for versatile use in clamping, lifting, and positioning tasks.

Technical Specifications

Key Design Features

- Precision-engineered piston
- Optimized cylinder bore
- Adjustable stroke length
- High-quality leak-proof seals

Performance Highlights

1 Pneumatic
Operational Mode

Suitable Applications

Clamping, Lifting, Positioning, Automation
