

Pneumatic Brake Valve

This pneumatic brake valve is constructed from cast aluminum and features multiple ports for connecting air lines. It controls air pressure to various components of the braking system in heavy vehicles.

Product Overview

Pneumatic Brake Valve System

The RL3511AZ-C pneumatic brake valve is a critical component designed for heavy-duty vehicle braking systems, such as those found in trucks and buses. Engineered for reliability, this valve manages air pressure distribution to ensure consistent and safe braking performance. Its robust construction makes it suitable for demanding automotive environments where precision and durability are essential.

Technical Details

Part Number	RL3511AZ-C
Component Type	Pneumatic Brake Valve
Construction Material	Cast Aluminum Alloy
Vehicle Compatibility	Heavy Trucks, Buses, Commercial Vehicles
